

# Simple Average Approach

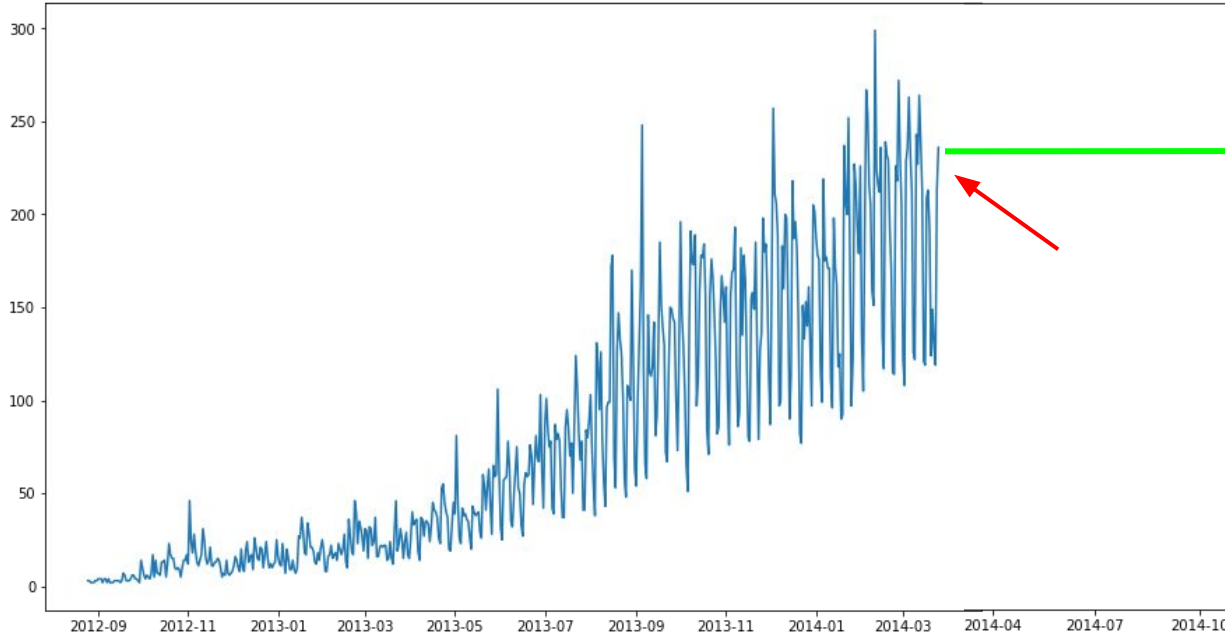

# Simple Average

**Problem Statement:** Forecast the number of passengers who will onboard the flight per day in the next quarter.

# Simple Average

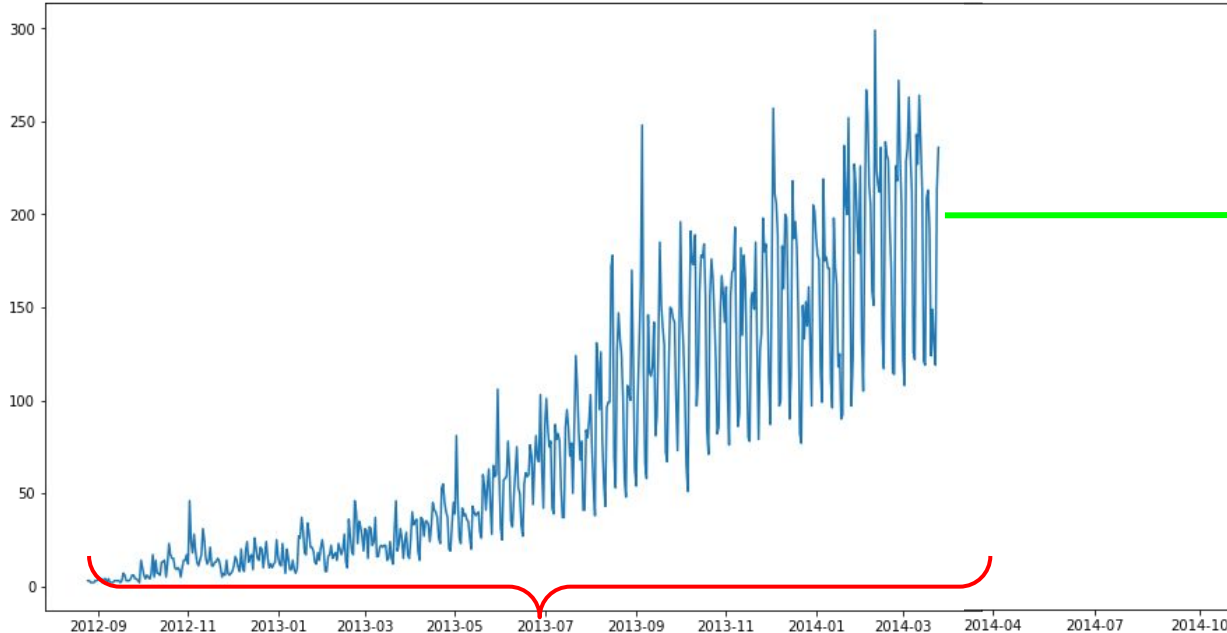

**Problem Statement:** Forecast the number of passengers who will onboard the flight per day in the next quarter.

Why consider only the last value?

# Simple Average

**Problem Statement:** Forecast the number of passengers who will onboard the flight per day in the next quarter.

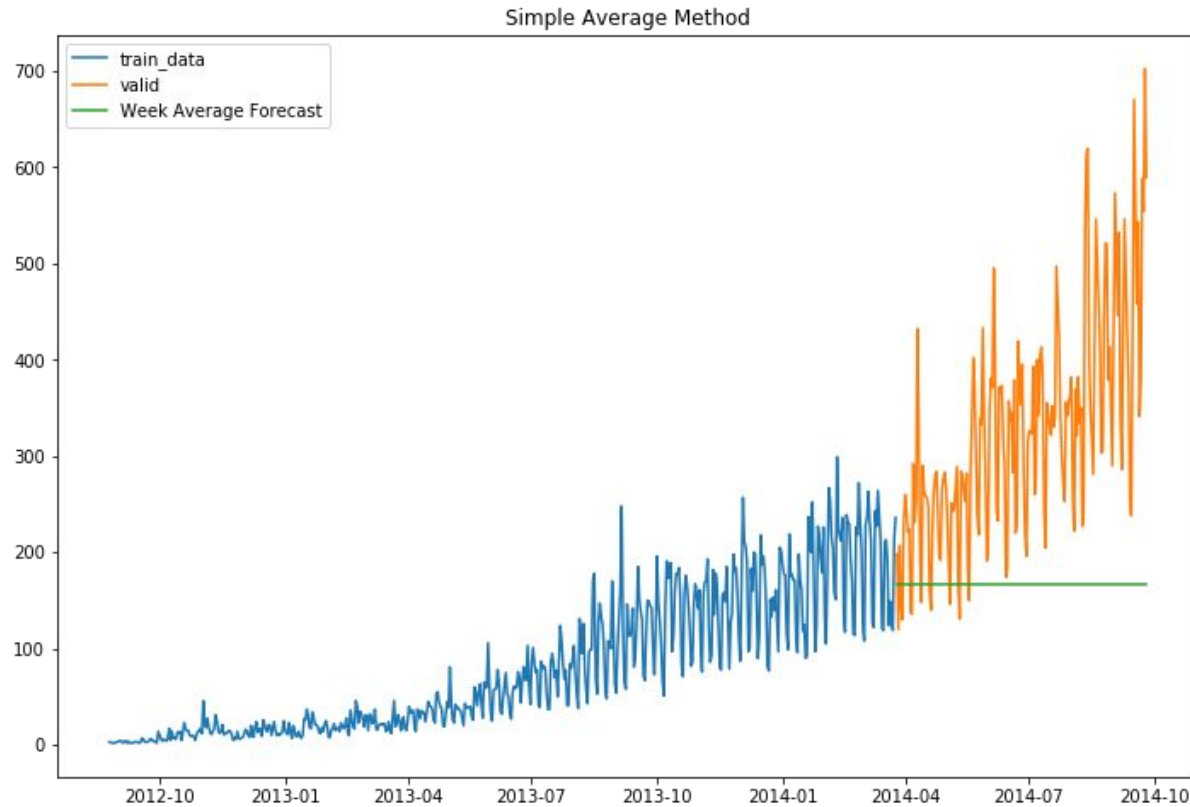

Why consider only the last value?

**Take Average of all values**
